

2200 XP Antiscalant

Scale Free 2200XP is a potable water antiscalant product that is ANSI/NSF Standard 60 approved for direct injection into drinking water.

Advantages

- Minimizes internal pipe scale formation
- Lowers operating and repair costs
- Certified under ANSI/NSF Standard 60 for drinking water systems
- Controls iron, silica, and mineral scale
- Compatible with all ANSI/NSF Standard 61 system components

Application: Scale Free 2200XP is intended to be directly injected into potable water piping, including hot water systems. It may be thawed and gently mixed before use if inadvertently frozen prior to use.

Shelf life is 12 to 24 months, depending on the storage environment and exposure to freezing.

Dosing: Please contact Scale Free for appropriate injection rates for your system.

Dilution: While this product is designed for neat injection, dilution is acceptable with softened quality water. Do not dilute with hard water as the scale inhibitors contained in Scale Free 2200 XP will react with hardness and thereby diminish the products efficacy in the targeted treated water system, requiring higher system injection rates to achieve desired results.

Specifications

pH	6.5 - 7.0
Specific Gravity	1.0 - 1.05

Clear liquid with no odor.

Packaging

Available	Weight
5 gal . Pail	42 lbs.
55 gal Drum	463 lbs.
IBC's (totes)	2,105 lbs.

NSF/ANSI Standard 60: Drinking Water Treatment Chemicals - Health effects in the naturally recognized health effects standard for chemicals which are used to treat drinking water.

Certified to NSF/ANSI/CAN 60
