

KEMCO
SYSTEMS

FEATURES

- High-Capacity Pumps
- Stainless Steel Piping
- Stainless Steel Skids
- Monarch Integration
- Variable Speed Drives

SPECIFICATIONS

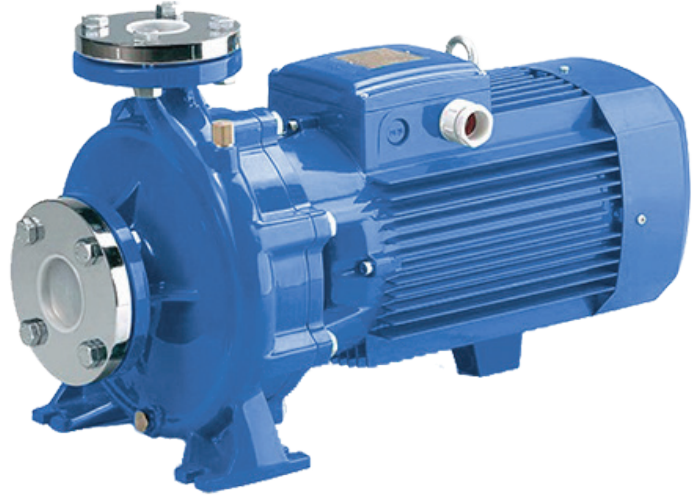

PROCESSED WATER:

Close-coupled, end-suction, horizontally-mounted centrifugal pumps

WASTEWATER:

Self-priming centrifugal pumps and air-operated diaphragm pumps

LOW PRESSURE PUMPS

Ensuring rapid machine fill times can improve batch mixer efficiencies. Kemco's low-pressure pump systems are designed to provide a consistent pressure and volume of water to the batch mixer(s) and truck(s), while requiring minimum electric power. Our designs consider both the total batch average, as well as peak demands. We strive to minimize fill times, giving the highest production capability possible.

APPLICATIONS

COLD WATER PRESSURE BOOSTING

HOT WATER DELIVERY

BOILER FEED WATER SYSTEMS
